

AUTOFLAME[®]
SERVICE & SUPPORT

YOUR PLANT ROOM PARTNER

Efficient, comprehensive boiler room solutions,
exceptionally engineered, delivered with 24/7 support.

 **MADE IN[®]
BRITAIN**

Autoflame Service & Support provide comprehensive solutions for industrial and commercial boiler plant rooms including:

- > Combustion management and monitoring systems
 - > High efficiency, 100% hydrogen firing burners
 - > Energy audits
 - > UK nationwide PPM and 24/7 call out support
 - > Technical boiler house risk assessments
 - > Training
-

Our UK manufactured product upgrades deliver typical energy savings of 25%*, carbon emissions reductions of 10% with a fact-based, guaranteed ROI. We deliver results that achieve increased reliability, minimal downtime and compliance – everything you need to meet your net zero goals and MCPD and UK ETS requirements.

Over 50 years ago, our founder Brendan Kemp started Autoflame Engineering, providing 24/7 breakdown and servicing of gas and oil firing burners. Driven to achieve maximum combustion efficiency, Brendan engineered the first micro-modulating combustion control system. To this day, Autoflame Engineering has continued to manufacture best in class combustion and boiler house controls.

Today, Autoflame Service & Support cover all boiler room applications with a wide range of products available as the licensed partner for Autoflame systems, Limpsfield burners and BKBD boilers. With our integrated solutions – air and outside source, hot water, steam, alternative fuels – we ensure that boiler plant rooms are ready for the regulations and energy sources of tomorrow.

*With an upgrade to a fully condensing BKBD boiler; typical energy savings of 15% with a burner and controls retrofit.

“

Autoflame Service & Support were remarkable on this project and truly solidified why Autoflame are market leaders in their field.”

THE LEADENHALL BUILDING, LONDON

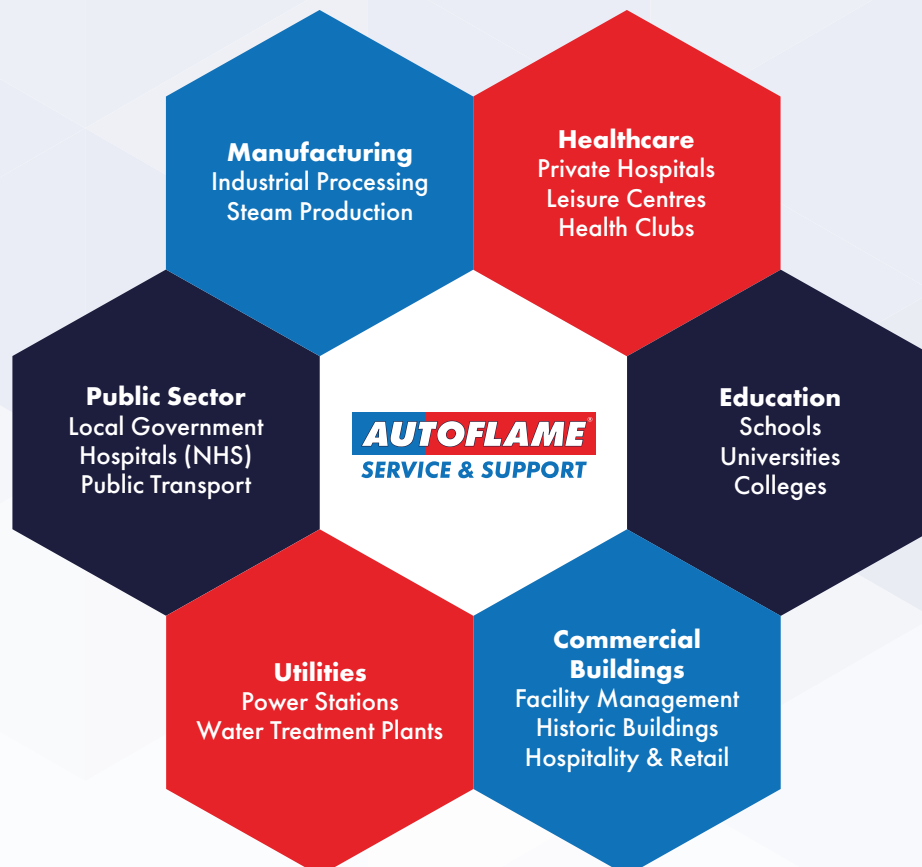

“

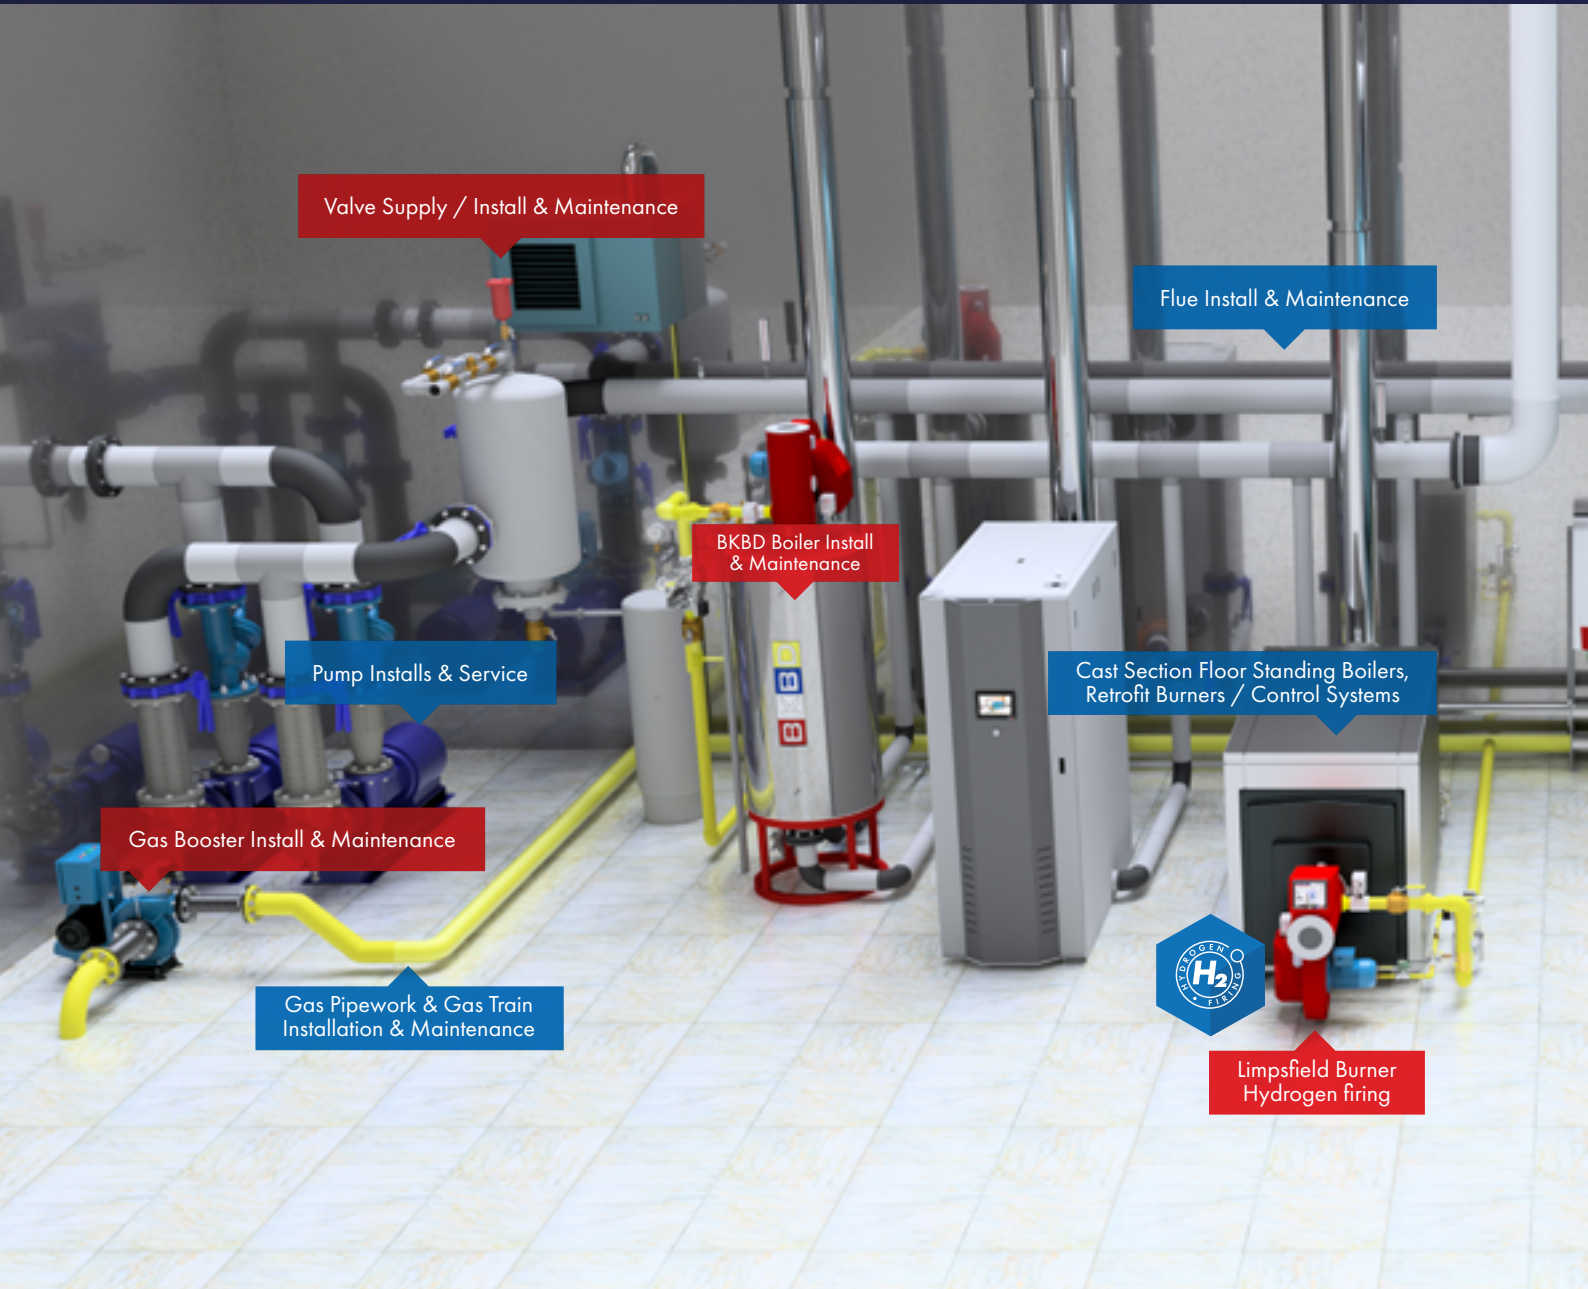

We would not hesitate in recommending Autoflame Service & Support.”

CHARLES DARWIN SCHOOL, KENT

Our in-house engineers are Gas Safe registered and highly trained combustion specialists who are on hand 24/7, so you always feel fully supported.

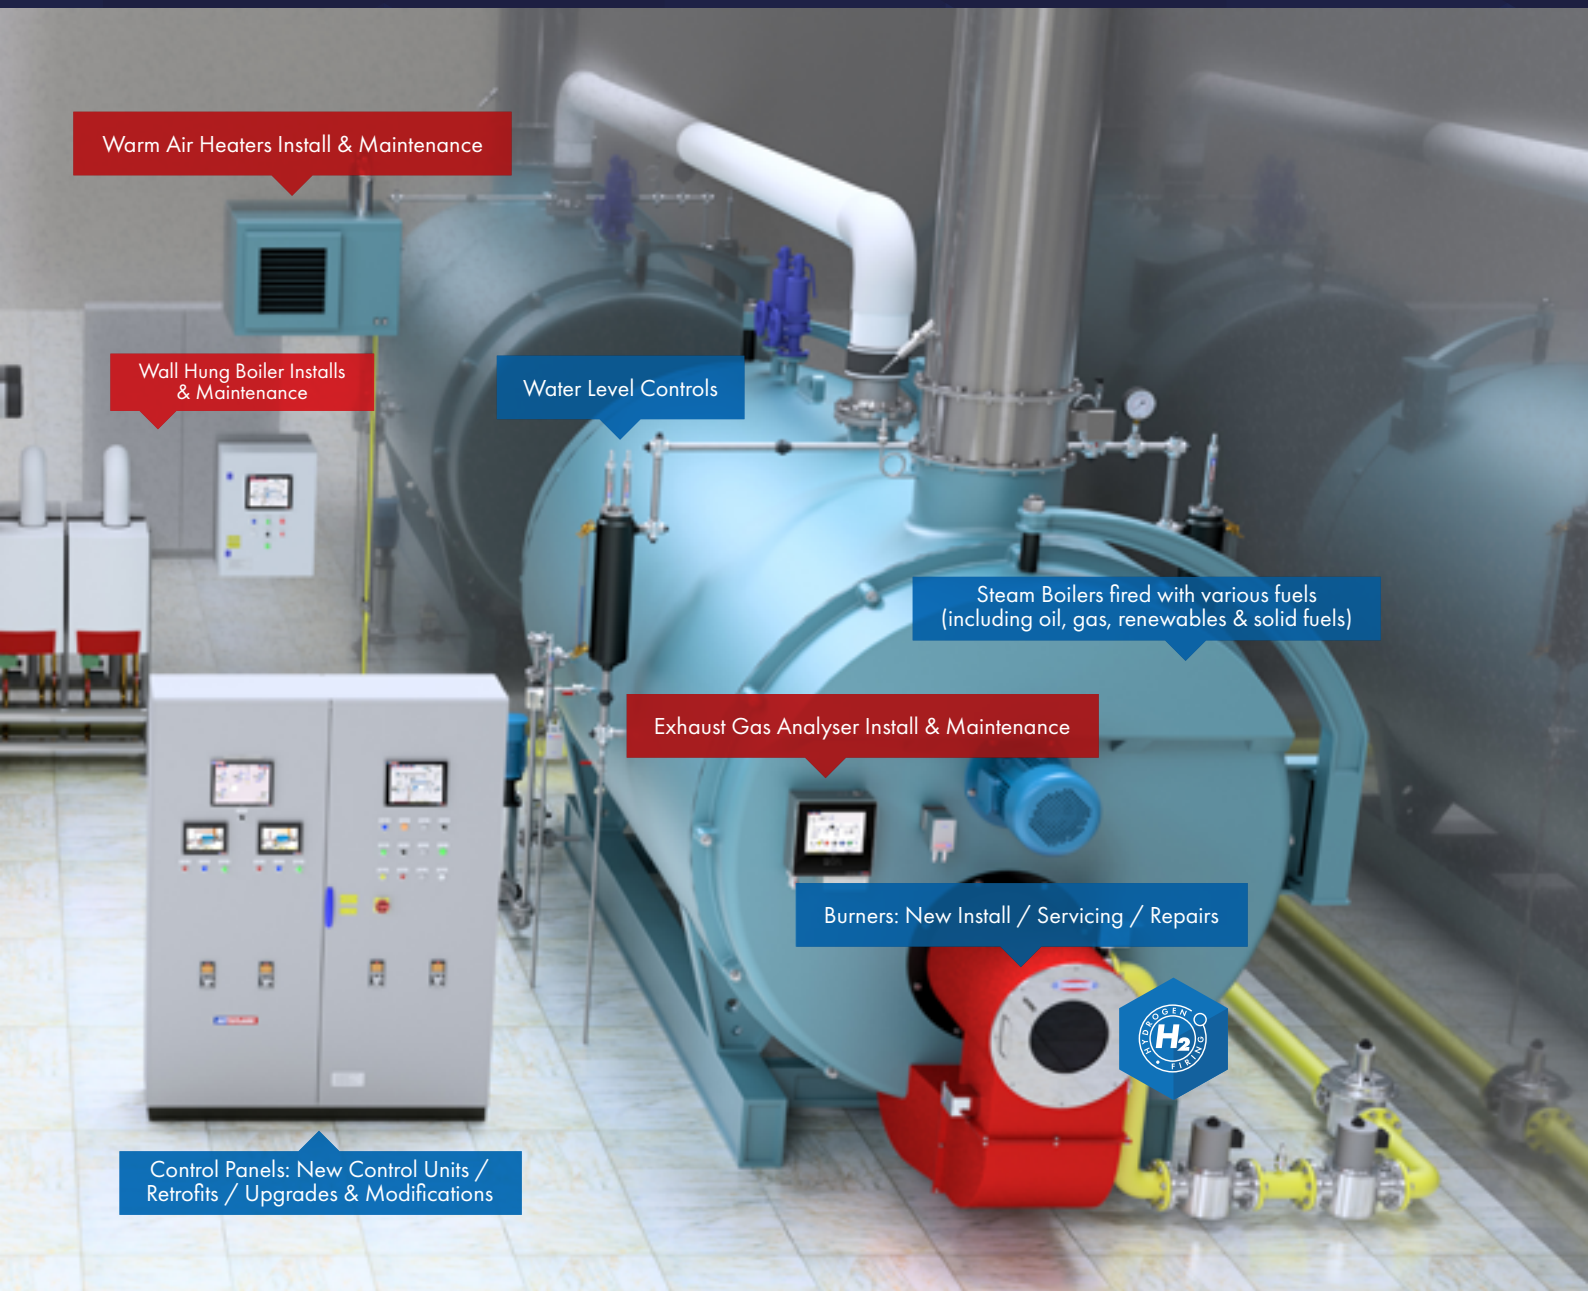

OUR SERVICES

“

I couldn't have asked for a better outcome with the performance of the team and the overall installation of the new burners.”

NO.1 POULTRY, LONDON

Warm Air Heaters Install & Maintenance

Wall Hung Boiler Installs
& Maintenance

Water Level Controls

Steam Boilers fired with various fuels
(including oil, gas, renewables & solid fuels)

Exhaust Gas Analyser Install & Maintenance

Burners: New Install / Servicing / Repairs

Control Panels: New Control Units /
Retrofits / Upgrades & Modifications

24/7 SUPPORT, 365 DAYS/YEAR

We have got you covered either via our in-office team or with our emergency hotline for unforeseen call outs and continued support out of hours. Based in South London, we operate UK wide. For emergencies or planned downtime, we also provide cost efficient rental boilers, hot-water and steam, to suit any application.

UPGRADES & PROJECTS

Reducing fuel costs and emissions, increasing reliability, and ensuring compliance – there are many reasons why our customers work with us to substantially increase efficiency in their boiler rooms. We provide turnkey solutions, from upgrading flame safeguards to installing fully condensing or even large steam boilers. Every project starts with a site survey by our experienced team. This enables us to base a quote on a factual usage analysis. The quote also includes an ROI estimate and guaranteed savings figures.

PLANNED PREVENTATIVE MAINTENANCE (PPM)

We offer regular servicing and Planned Preventative Maintenance (PPM) for every boiler room application. Working with a vast variety of industries and sectors, we ensure that system integrity and efficiencies are maintained. We recommend two service visits from our team per year to keep equipment performing at its best. This includes an annual gas safety certificate and engineer report.

***Good quality of engineering knowledge
and communication.”***

NHS HOSPITAL, WEST ENGLAND

CONSULTANCY SERVICES & AUDITS

Our expert consultants and experienced combustion engineers provide a wide range of consultancy services and independent audits – from compliance assessments (MCPD & UK ETS), capital expenditure assessments, digitised plant room audits, asset reports, emissions and energy audits, RAMS and other risk assessments, as well as EOL surveys. Assessments can also contain asbestos reports to fulfil HSE regulations.

CRITICAL SPARES

Supply chain issues? Not with us. We hold a critical spares stock in our warehouse for fast turnaround repairs on partner applications, enabling our field engineers to be equipped with any part necessary when attending sites. This minimises downtime and substantially reduces repeat or long service visits. We also have contacts to other manufacturers to source spares for you.

TRAINING

Through our partner BK Labtech, we deliver training of on-site staff post install on our partner applications, but can also fulfil general training needs compliant with HSE regulations. The courses can take place in a fully equipped, purpose-built facility in South London or on site with our customers. Attending would be anyone interested in understanding how a boiler room works in terms of energy consumption, emissions, compliance regulations, and/or ROI.

“

Great workmanship. All engineers on-site and off-site were extremely helpful.”
